The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chromosome 22 Sequencing Project
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence Quality Assessment:
This entry has been annotated with sequence
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequencing vector: pUC18; 100% of reads Chemistry: Dye-terminator Big Dye and dGTP; 100% of reads Assembly program: Phrap; version 0.990329

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurachly this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our web site (http://fruitfly.berkely.cdu) or send email to

υυ

New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis.

```
The invention relates to an isolated b.-like (b/-u) polypeptiae (l) are polypeptide, polymelocitide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility.)

C conditions including reproductive disorders (e.g. infertility.)

CC miscarriage, preterm labour and delivery and endometriosis) and proteins and other regulators of B7-L polypeptides are extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of propeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer. Unng, brain, breast, ovarian, cancer including seminal vesicle cancer including seminal vesicle cancer of lasease and cancers of heamatopoietic system. B7-L polypeptide testicular cancer and cancers of heamatopoietic system. B7-L polypeptide pathway can be manipulated to regulate cyctoxic T-lymphocyte response in pathway can be manipulated to regulate cyctoxic T-lymphocyte response in callegraft transplantation, graft versus host diseases. B7-L molecules are useful consumment of the symptoms associated with diseases involving chronic for alleviating the symptoms associated with diseases involving control control or to treat autoimmune diseases involving control control or to treat autoimmune diseases and autoimmune thrombocytopenic purpura and psoriasis, chronic inflammatory diseases such as inflammatory bowel diseases (Conn's disease and cutering the symptom and psoriasis, chronic inflammatory diseases such as inflammatory diseases. Habinator's diseases and involving abnormal cell proliferation, including arteriosclerosis and involving abnormal cell proliferation, including arteriosclerosis and involving abnormal cell proliferation, including arteriosclerosis and involving abnormal cell proliferation, allocated and solve transfensis and develu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        421 TGAAGTTACTTGTCTACCCTCACACTGGACCTGGCTCCCGGATATTTCCTGGGAGCTCGG 480

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscaringe, preterm labour and delivery and endometriosis) and miscaringe, preterm labour and delivery and endometriosis) and extracellular domains and other regulators of B7-L polypeptides are proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are confined. For enhandaria in transgenic mice overexpressing B7-L growth and maintenance of cancer cells based on the observation of polypeptide. Hence modulators of (I) are useful for the treatment of polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, pathway can be manipulated to regulate cytocoxic T-lymphocyte response in cestional diseases and autoimmune diseases. T-cell dependent B1 dorate the symptoms associated with diseases under as systemic coll mediated diseases and autoimmune diseases such as systemic lupus erythematorsus, rhematoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpure and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease such as inflammatory bowel disease (Crohn's disease under an organization of cancerions in the prolong graft survival B7-L molecules are also useful for diagnosis and treatment of diseases under a involving abnormal cell proliferation, including arteriosclerosis and allevation of toxic shock syndrome or allosenstitation of toxic shock syndrome or allosenstitation of toxic shock syndrome or allosenstitation of toxic shock syndrome or allosenstitation of toxic shock syndrome or allosensitiation of toxic shock syndrome or allosens New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polymucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and constrained domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, allograft transplantation, graft versus host disease, T-cell dependent B-lograft transplantation, graft versus host disease, T-cell dependent CC for alleviating the symptoms associated with diseases such as systemic immune cell dysfunction or to treat autoimmune diseases involving chronic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, disease and ulcerative colitis), Grave's disease, Hashimoto's thyrociditis and ulcerative colitis), Grave's disease, Hashimoto's thyrociditis and ulcerative colitis, hey are also useful disease (Crohn's disease act also useful for diagnosis and treatment of diseases cuch alleviation of toxic shock syndrome or allosenstisation due to blood rearestivity, and for treatment of alleray, asthma and hypersensitivity.

of gene therapy. The genes are involved in tissue and/or cell regeneration. Membrane proteins, signal transduction-related proteins, transduction-related proteins, disease-related proteins and genes enroding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but
                                                                                                                                                                                                                    ö

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide in the polynucleotide and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or

                                                                                                                                             The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polymucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immuse response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of

seminal vesicle hyperplasia in transgenic mice overexpressing B7-L cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cesticular cancer and cancers of haematopoietic system. B7-L polypeptide cesticular cancer and cancers of haematopoietic system. B7-L polypeptide allograft transplantation, graft versus host disease, T-cell dependent B-cc call mediated diseases and autoimmune diseases. B7-L molecules are useful cor alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic immune thrombocytopenic purpura and psoriasis, chronic inflammatory immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and disease and ulterative collitis), Garave's disease, Hashimoto's thyroiditis and classative collitis, Tavy are also useful as immunosuppressive agents for dispetes are also useful for disposis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and restensed to toxic shock syndrome or allospatides are useful for vascular restenosis. Antagonists of B7-L polypeptides are useful for vascular restenosis, and for treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephitis), skin disorders cancentia, thrombocytopenias, Guillain-Barre syndrome and myasthemia and mammatary and pumphigus and psophidus and psophidus and elections mannia, thrombocytopenias, Guillain-Barre syndrome and myasthemia and anaemia, thrombocytopenias, Guillain-sensitivate of human B7-L, hypercent sensitivity and spansers the colding sensitive dispensed and myasthemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        쉽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food companent. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for are useful in diagnostics as expressed sequence tags (EST) for in forensics, in assessing biodiversities, or in identifying mutations in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide for center also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 3043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TCAACGICCACCCAGGCCAGGCAAGTCATCCACAGGCTTCTTTTAATCTGGCCAGTCCTGA 1140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CGGCTACAATTCAGATGAACAAAAAGACCACCACGCTTCTCTCCCCCCAAATCCTG 1020

Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       164 AGIGACAIGGIGGIGGIGAAGGGICCAGGCCCAIGGAGCCCAICAICACCAAIGACCGCIIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           104 ICCCAGGCTCGCTTCAACTGCACCGTCTCCCAGGGCTGGAAGCTCATCATGTGGGGCTCTC

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded protesins (ABBS7737-ABBR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                 Drosophila melanogaster expressed polynucleotide SEQ ID NO 40961.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe byridises at high stringency to a nucleic acid expressed in the human staging, monitoring and prognosing diseases of the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast diseases of the breast unmours. Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel single exon nucleic acid probe used to measuring gene expression in
                                                                                                                                                                                                            Probe; human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel single exon nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                       Probe #4326 used to measure gene expression in human breast sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

```
The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polypeptide related disease, disorders or conditions including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility, an including reproductive disorders (e.g. infertility) and including seminal vesicle hyperplasia and other regulators of E7-L polypeptides are collaborated. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cell mediated diseases and autoimmune disease, T-cell dependent B-allograft transplantation, graft versus host disease, T-cell dependent B-allograft transplantation, graft versus host diseases involving chronic immune chrombocytopenic purpure and psoriasis, chronic inflammatory immune thrombocytopenic purpure and psoriasis, chronic inflammatory collitis, grave's disease, drawing disease such as inflammatory bowel disease, declared and disease such as inflammatory bowel disease, declared and disease such as inflammatory bowel disease, declared and diseases and culcerative collitis, grave's disease, lashimoto's thyroiditis and disease mellitus They are also useful as immunosuppressive agence of involving abnormal cell proliferation, including arterisorlerois and for transplantation or to prolong graft survival. B7-L collogenties are also useful for diseases (Crohic sections, nebropathies (e.g. longerulopathies, else diseases, and pemphagoid), endocrinopathies (centralization declares). Antagonists of the disease such as independen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Glial cell line-derived neurotrophic factor receptor gamma 1; GDNFR-alpha; glial cell line-derived neurotrophic factor; GDNF; neurodegenerative disease; amyotrophic lateral sclerosis; GDNFR-gammal;
                                                                                                                                                           New B7-like polypeptides, polymuclectides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5' PCR primer for GDNFR-gammal cDNA encoding the full length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present sequence represents the coding sequence of mouse B7-\hat{L}_-m1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3611), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antiasthmatic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder; gene; ss.

Example 6; Page 68; 156pp; English.

PCR primers AAV99359-60 were used to amplify cDNA encoding the full length protein of a glial cell line-derived neurotrophic factor receptor gamma 1 (GDNRR-gammal). The amplified product was subsequently cloned and atprayessed in Baculovirus. GDNRF-beta shares high homology with Cloned and alpha, which is capable of complexing with glial cell line-derived neurotrophic factor (GDNF) and mediating cell response to GDNF. The GDNFR with decreased activity of the respective polypeptides. They can be used for treating neurodegenerative diseases such as amyotrophic lateral dyskenisia, Parkinson's disease, schizophrenia, insomnia, tardive tumour, renal disorders, kidney failure, gut dysfunction, or for tregeneration of cardiomyocytes, epithalium or hepatocytes. Antagonists of the cardiomyocytes, epithalium or hepatocytes. Antagonists of the cardiomyocytes, epithalium or hepatocytes. Antagonists of the polypeptides can be used for treating disorders associated with increased activity of the respective polypeptides. The products can also be used for detection, diagnosis and drug screening

New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein.

Claim 1; SEQ ID NO 930; 49pp + Sequence Listing; English.

The invention relates to an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions comprising a sequence sabeted from any one of 999 sequences (ABNO9231-ABNO9231), given in the specification or its fragment. A polypeptide (II) encoded by given in the specification or its fragment. A polypeptide (II) encoded by (I), a transgenic plant (II) comprising an exogenous nucleic acid or a cycle of the cycle of the september of the second or a useful in identifying homologous or related genes, in producing compositions that modulate the expression or function of its encoded protein, mapping functional regions of the protein and in studying compositions that wouldate the expression or function of its encoded protein, mapping functional regions of the protein and in studying compositions that wouldate the expression or function of its encoded associated physiological pathways. (I) is also useful for the genetic associated physiological pathways. (I) is also useful in stream that care best capable of withstanding a particular disease or environmental care best capable of withstanding a particular disease or environmental cares or pathways. (II) and (III) are useful in improved methods of treating crops to pathways. The screened agents are useful in improved methods of treating crops to programs to identify agents that mimic or enhance the action of tolerance companee their tolerance to environmental stress. (II) is also useful for chance their tolerance to environmental stress. (II) is useful for identifying other mediators that may induce companee their tolerance to environmental stress. (II) is useful for identifying other mediators that may induce the any specific insect and/or pathogen is responsible for damage to a conficular plant, for identifying other mediators that enhance to environmental stress. (II) encompanied or inhibitions of interest, for establishing the extent to which particular plant, for identifying productions of nutritional, commercial or medicina

```
This sequence encodes a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neuropachy), muscular diseases (including the muscular dystrophies) and nerve and muscle trauma and in diagnostic assays for such conditions
                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New factor alpha 3 receptor polypeptide and e.g. DNA and agonists - used to treat neuro degenerative diseases, muscular diseases and nerve and muscle trauma and in diagnostic assays.
that may affect the biological function of the gene or gene products. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=999909770445.

Sequence 12735, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICATION: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 10196-02-18
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR PILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-28
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 12735
LENGTH: 1857
